

# Let's find your size!

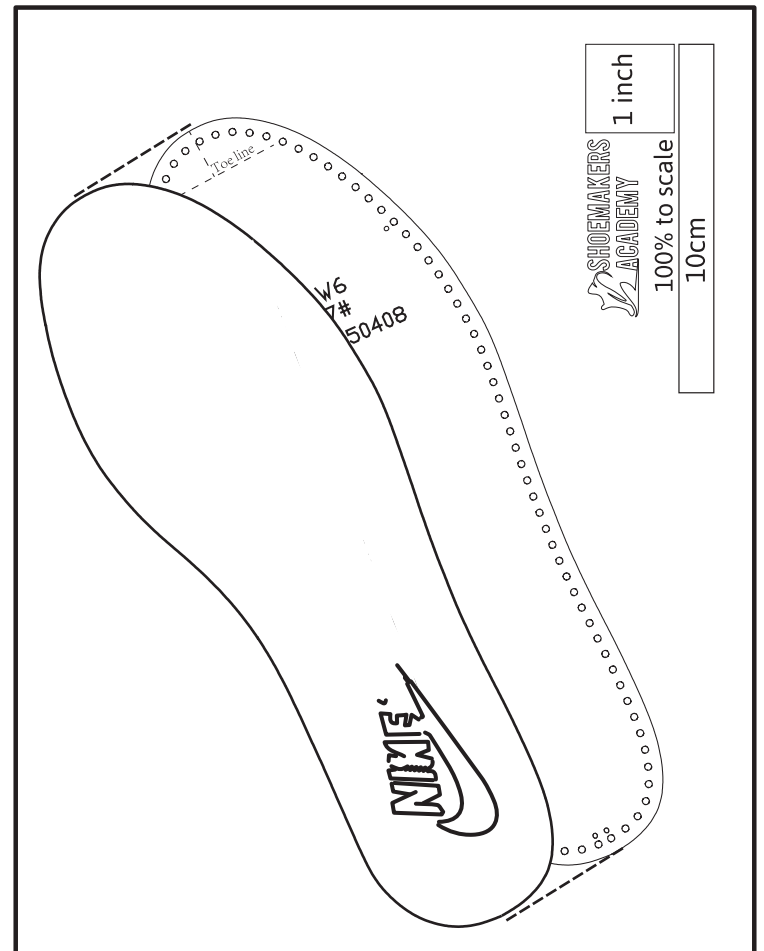

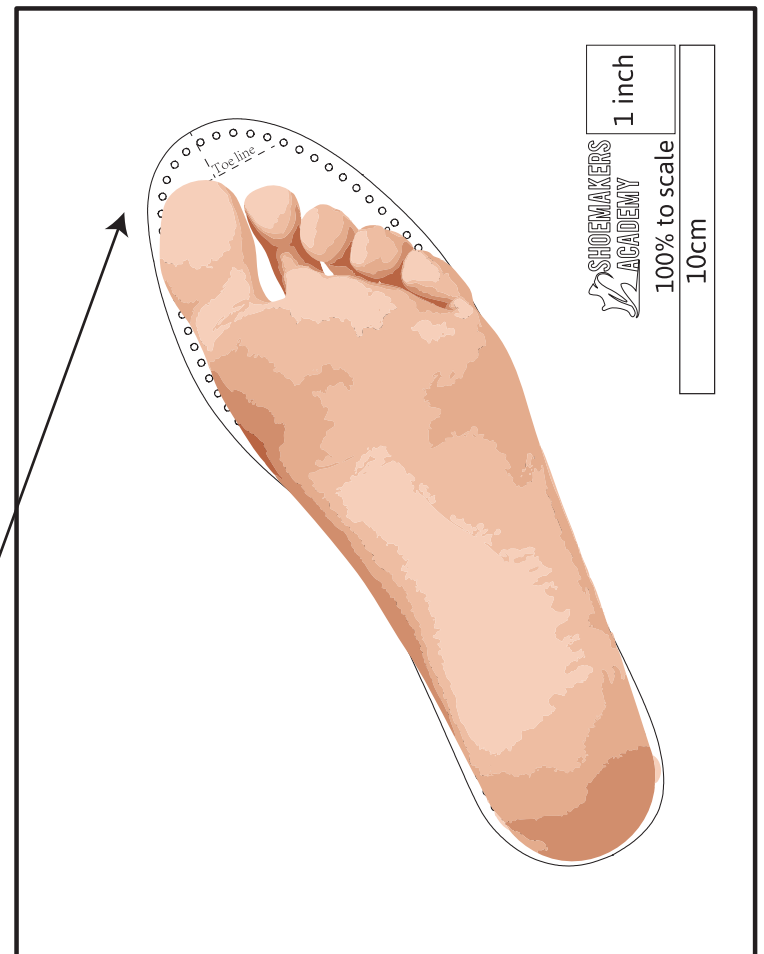

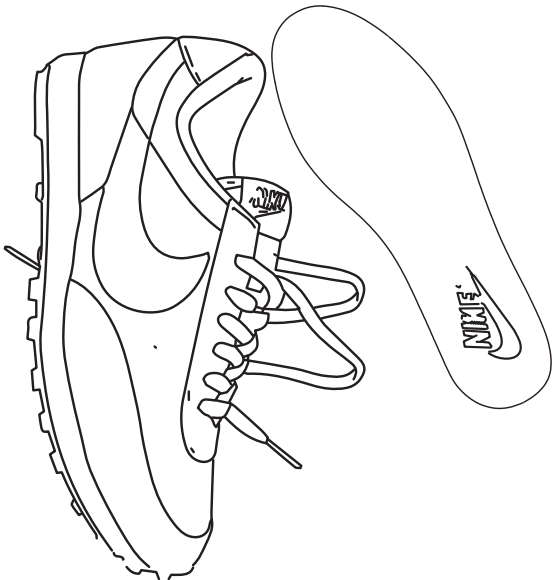

Print the page with your shoe size.

Stand on the size guide with your heel at the back to test the length.

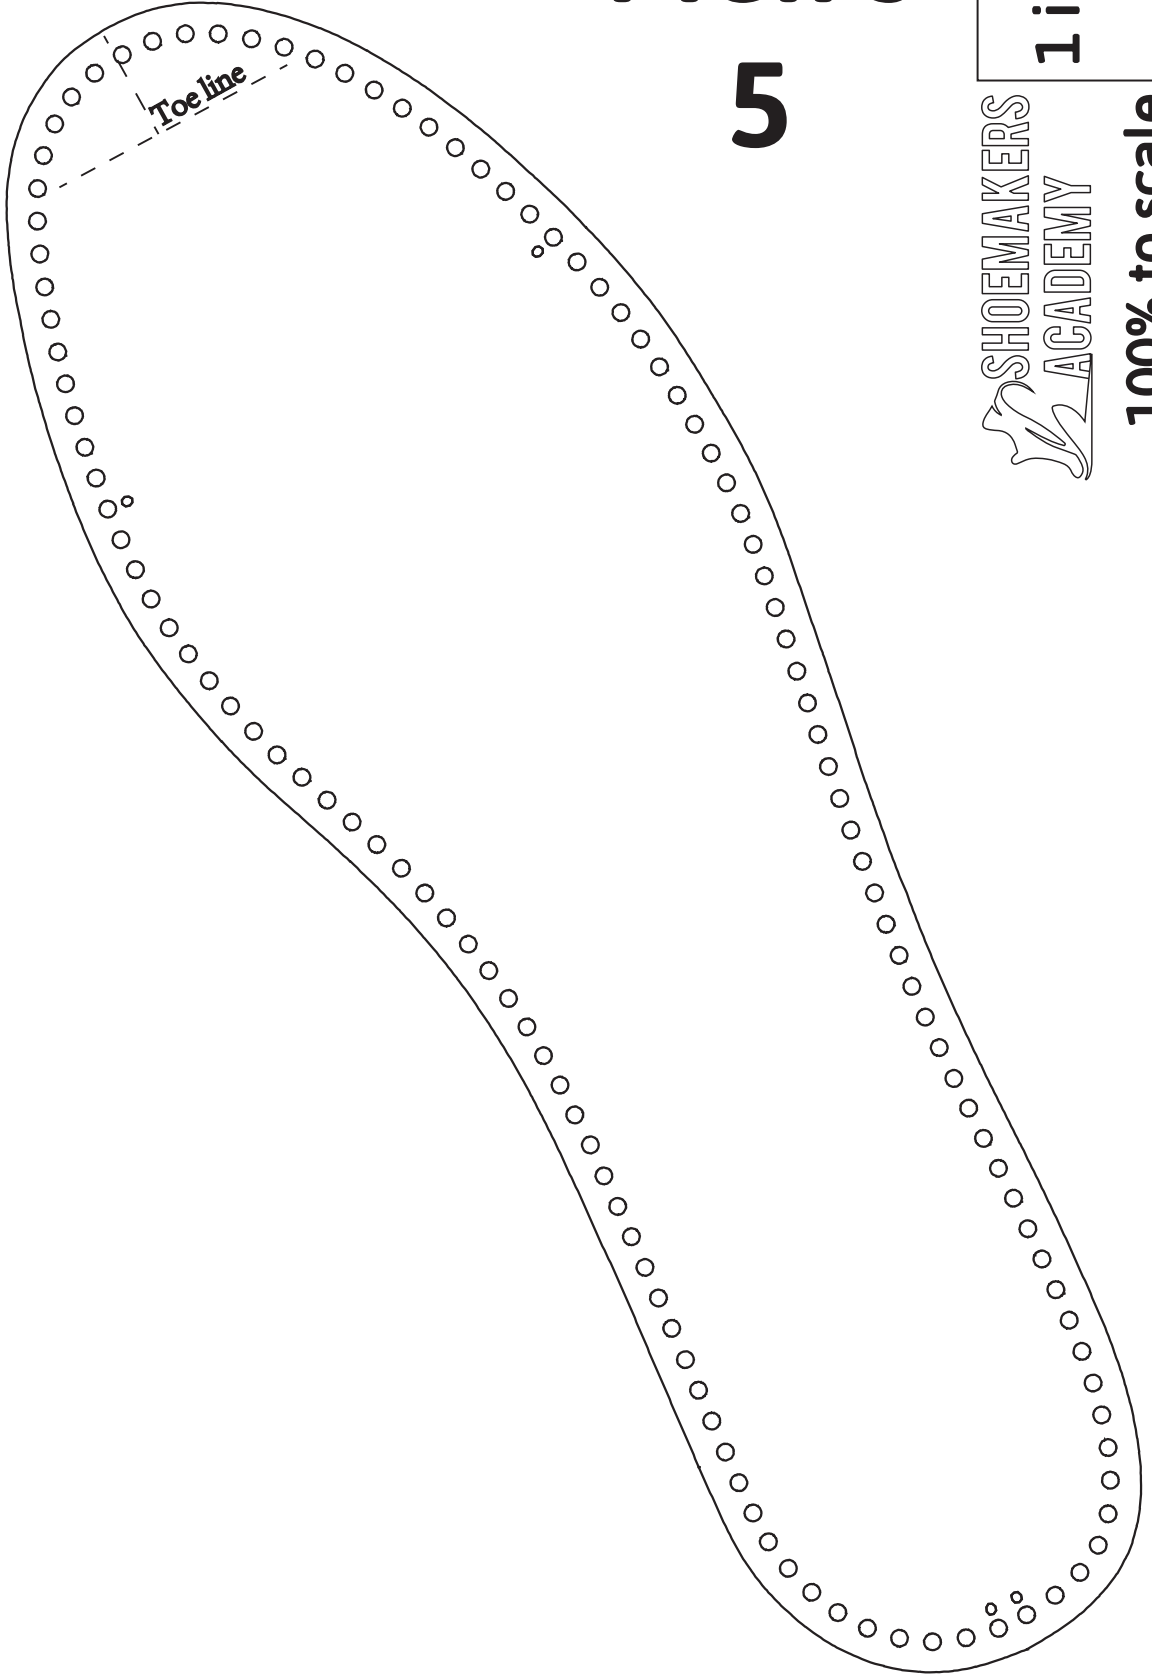

Please note: Standing inside the rubber sole is not an accurate way to find your size.

Your toes should have some extra space (about 1/4") and be just up to the toe line.

Or, try this method to find your size:  
Remove the insole of your favorite shoe and compare the length.
